

## Micro CAN Module - Datasheet

### Micro CAN Module - Datasheet

Function	Typically installed behind the light switches, each micro CAN Module receives its input from up to 6 light switches, can control up to 6 feedback/status LEDs and connects up to 2 temperature sensors. Connects to the CAN Control Module through CAN bus.
Type	Plastic casing, fits behind light switch
Dimensions	35mm x 35mm x 20mm
Location	Each room, advised to use 50mm deep wall mount boxes for the switches
Power Supply	12-24 VDC - 50mA MAX
BUS	CAN (EIB twisted pair KNX cable, Max CAN bus length is 400m)

**Note:** During order, please select the right SKU so the micro CAN will be delivered with the right sensors factory soldered. The micro CAN module can be delivered in 4 different SKU's:

- Without sensors
- with 1 sensor (temperature only) soldered
- with 1 sensor (temperature and humidity) soldered
- with 2 sensors (temperature only) soldered
