FULL STACK DEVELOPER

WHO ARE WE?

At OpenMotics, we are re-imagining, re-designing, and re-engineering the way your building works. Smart building automation increases comfort, lowers your energy consumption and with optimised energy flows we help fighting the global carbon footprint.

We are looking for passionate and creative people who love developing tomorrow's IoT platform. OpenMotics is a fast-growing company with a no-nonsense culture that gets stuff done.

We build a professional open source building automation platform including automation hardware, energy measurement capabilities and a dynamic cloud management interface allowing the functionality to be extended by 3rd party services.

We get off on solving real problems in the most elegant manner possible and want to work with people who think alike. We're a team but also a family. We dream big, iterate fast, and like to build a better future.

YOU...

... have a Master or Professional Bachelor in CS/IT/ICT or equivalent through experience

... have at least 3 years of experience developing software, preferably in Python/Django

... like to develop a full stack software platform from direct serial communication with microcontrollers up to a scaling cloud platform with various web interfaces, APIs and market place

... like to discuss technical challenges with the team and willing to step out of your comfort zone every now and then (to e.g. learn something new, or help out the team)

... are hands-on and love real-time data

... are interested in embedded devices, firmware, hardware development

... like an environment where everything doesn't have to be serious all the time and you appreciate humor, fun and off-work activities.
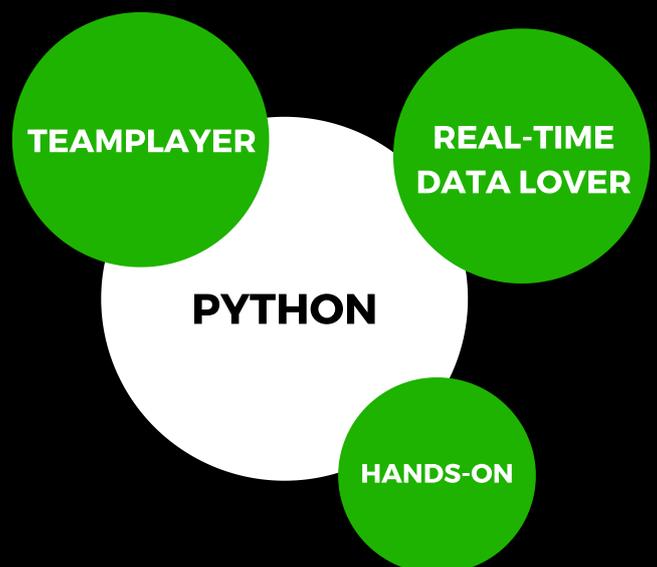

NICE TO HAVES

- Contact with C++ and Qt (either just briefly as a hobby or professional)
- Familiarity with time series databases
- Some basic frontend experience with JS frameworks e.g. Angular
- Exposure to automated testing/deployment/docker/...
- Experience with real-time streaming data (Kafka, MQTT, ...)
