

FRONTEND LEAD DEVELOPER

WHO ARE WE?

At OpenMotics, we are re-imagining, re-designing, and re-engineering the way your building works. Smart building automation increases comfort, lowers your energy consumption and with optimised energy flows we help fighting the global carbon footprint.

We are looking for passionate and creative people who love developing tomorrow's IoT platform. OpenMotics is a fast-growing company with a no-nonsense culture that gets stuff done.

We build a professional open source building automation platform including automation hardware, energy measurement capabilities and a dynamic cloud management interface allowing the functionality to be extended by 3rd party services.

We get off on solving real problems in the most elegant manner possible and want to work with people who think alike. We're a team but also a family. We dream big, iterate fast, and like to build a better future.

YOU...

- ... have a Master or Professional Bachelor in CS/IT/ICT or equivalent through experience
- ... have at least 4 years of experience developing software, preferably in Javascript/Typescript
- ... like to develop responsive interfaces
- ... like to think about how the UX of an interface can be improved
- ... like to discuss specifications and give your feedback to the designers that are creating new interfaces
- ... like to discuss technical challenges with the team and willing to step out of your comfort zone every now and then (to e.g. learn something new, or help out the team)
- ... like an environment where everything doesn't have to be serious all the time and you appreciate humor, fun and off-work activities.

As a lead developer, you will work on a set of frontend projects. This includes a set of Angular web applications as well as a mobile Ionic-Angular application. You'll take the lead on implementing new features, going from discussing new requirements with the designer to a full implementation into the web or mobile app. You'll work side by side with other colleagues that will be working on other projects that are based off the same stack.

NICE TO HAVES

- Experience with Angular or other Typescript based frontend frameworks
- Experience with Ionic (or other hybrid mobile app frameworks)
- Experience with native iOS or Android is a plus
- Exposure to automated testing/deployment/docker/...

WHAT WE HAVE TO OFFER

- A function in a growing and financially healthy company with real professional development possibilities
- A lot of responsibilities. You will be part of the team, you will be part of decisions and the future of the company
- You will work full-time, of which at least 2 days a week from our Ghent based office and be part of a vibrant community of young start-ups with occasional after-work activities
- A contract of indefinite duration with a competitive wage adjusted for your function according to your experience and potential
